The objective of this study was to identify the personality traits and nursing care issues of clients living with HIV and AIDS. A qualitative, exploratory research design was used to collect data. The participants were 18 clients living with HIV and AIDS. A data collection instrument included demographic information, 12-Item Personality Inventory (version R), and the Nursing Outcome Scale, Version II. The research questions were "What are the personality traits of clients living with HIV and AIDS?" and "What are the nursing care issues of clients living with HIV and AIDS?" Client responses were transformed into an aggregated data matrix. Twenty-five data matrices of 52 total data points emerged. The majority of client responses fell into three clusters: "Enduring," "Gaining," and "Comply." Clients from the Enduring group expressed a person-centered approach to HIV/AIDS care. The clients in the Gaining group stated that they were inclined to place their needs first. Clients in the Comply group indicated that they were willing to comply with physician's recommendations. The participants in the Enduring group were more likely to accept physical and psychological changes resulting from HIV and AIDS. This group expressed feelings of hope, acceptance, and personal growth. This group also shared experiences of self-care and coping with a disease that comes with social stigma. The Gaining group and the Comply group shared feelings of fatalism and psychological coping. The Enduring group and the Gaining group experienced more negative affect, while the Comply group reported lower levels of negative affect. Patients in the Gaining and Comply groups expressed few care issues. Patients with the Enduring group were more likely to state that their health care team members are "sick," lack empathy, and are unwilling to

The program can be used to draw, edit, view, and manage digital drawings, diagrams, and models, both created in AutoCAD and imported from other applications. The file format is text based, compressed and digitally signed. It contains a "magic" byte at the beginning of the file and also defines three kinds of blocks: Header, Text, and Elements. Each text block contains a small header at the beginning that contains metadata about the text block. It also contains a text record for the complete text of the

It can import all objects in the native file format. AutoCAD is a starting point for creating a number of architectural, mechanical, electrical and civil 3D models. AutoCAD is also used by many Autodesk technical support personnel, and some users may continue to use AutoCAD after their subscriptions expire. CAD Manager AutoCAD R14 contains a plug-in architecture called the CAD Manager, which allows drawing updates to be shared with other files. For example, an architect can use the CAD Manager to send a drawing update to the mechanical engineer and receive changes to the mechanical engineer's drawing. The CAD Manager was available in AutoCAD 2006 and R12, but was removed in later releases of the program. RapidCAD AutoCAD's predecessor, DraftSight, from 1985 was available on the Microsoft Windows 3.0 operating system. In 1985, Autodesk released DraftSight for Windows. DraftSight was a non-linear authoring system for AutoCAD drawings. A drawing was composed of multiple objects and blocks. Each block was a collection of layers and text. DraftSight came in a number of configurations, depending on the application, CAD features and size of the drawing. The last configuration included was 80 MB, with an option to export to AutoLISP script. On April 14, 2005, Autodesk released RapidCAD, which was a BETA version of DraftSight, but not yet compatible with a1d647c40b
